

St John Vianney Catholic School

Love one another as I have loved you

ICT Policy

Mission statement

"St John Vianney School is an academic community which is characterised by the Gospel Spirit of Peace, Justice and Love. All that we do and say in our school will be dominated by Jesus' words "Love one another as I have loved you". Our school rules are based on this statement and carried in "our hearts and our heads" and reflected in the life and work of our school".

St John Vianney Catholic Primary School is committed to safeguarding and promoting the safety and welfare of all children and expects all staff and volunteers to share this commitment.

1 Aims and objectives

1.1 ICT has become part of the way in which we all work and entertain ourselves. Almost everything we do at school now involves the use of ICT:

- online lesson research, teaching plans and resource materials;*
- lesson delivery via either overhead projector or interactive whiteboard;*
- communication by e-mail and fax;*
- document distribution and storage;*
- assessment information analysis;*
- production and editing of reports;*
- accessing our learning environment online.*

Thus, through teaching ICT, we equip children to participate in a world of rapidly changing technology. We enable them to find, explore, analyse, exchange and present information. We also help them to develop the necessary skills for using information in a discriminating and effective way. This is a major part of enabling children to be confident, creative and independent learners.

1.2 Our objectives in the teaching of ICT are:

- to facilitate the finding, selection and use of information;*
- to teach the use of ICT for effective and appropriate communication;*
- to enable the monitoring and control of events, both real and imaginary;*
- to teach the application of ICT to children's learning across the curriculum;*
- to explore the value of ICT, both to children and to society in general;*
- to examine issues of security, personal safety, confidentiality and accuracy;*
- to develop the cross-curricular use of ICT in all subjects;*
- to ultimately ensure that children become more independent users of ICT.*

2 Teaching and learning style

- 2.1 *As an objective of teaching of ICT is to equip children with the technological skill to become independent learners, the teaching style that we adopt is as active and practical as possible. While, at times, we do give children direct instruction on how to use hardware or software, the main emphasis of our teaching in ICT is for individuals or groups of children to use computers to help them to progress in whatever they are studying. So, for example, children might research a history topic by using role-play software that engages them in a highly visual way, or they might place themselves in a historical setting by manipulating a digital photograph, or they might investigate a particular issue on the Internet.*
- 2.2 *We recognise that all classes have children with a wide range of ICT abilities. This is especially true when some children have access to ICT equipment at home, while others do not. We provide suitable learning opportunities for all children by matching the challenge of the task to the ability and experience of the child. We achieve this in a variety of ways:*
- *setting tasks which are open-ended and can have a variety of responses;*
 - *setting tasks of increasing difficulty (not all children complete all tasks);*
 - *grouping children by ability in the room, and setting different tasks for each ability group;*
 - *providing resources of different complexity that are matched to the ability of the child;*
 - *using classroom assistants to support the work of individual children or groups of children.*

3 ICT curriculum planning

- 3.1 *The school uses the national scheme of work for ICT as the basis for its curriculum planning. We have adapted the national scheme to the local circumstances of the school.*
- 3.2 *We carry out the curriculum planning in ICT in three phases (long-term, medium-term and short-term). The long-term plan maps the ICT topics that the children study in each term during each key stage. The ICT subject leader devises this in conjunction with teaching colleagues in each year group, and the children often study ICT as part of their work in other subject areas. Our long-term ICT plan shows how teaching units are distributed across the year groups, and how these fit together to ensure progression within the curriculum plan.*
- 3.3 *Our medium-term plans, which we have adopted from the national scheme of work, give details of each unit of work for each term. They identify the key learning objectives for each unit of work, and stipulate the curriculum time that we devote to it. The ICT subject leader is responsible for keeping and reviewing these plans.*
- 3.4 *Key Stage One staff who deliver the teaching of ICT are responsible for adapting the short-term plans already available. These daily plans list the specific learning objectives and expected outcomes for each lesson. The staff responsible keep these individual plans and*

they and the Key Stage Two ICT teacher often discuss them on an informal basis. In Key Stage Two lessons are planned and delivered by an HLTA with unqualified teacher status.

- 3.5 The topics studied in ICT are planned to build on prior learning. While we offer opportunities for children of all abilities to develop their skills and knowledge in each unit, we also plan progression into the scheme of work, so that the children are increasingly challenged as they move up through the school.*
- 3.6 Parents and carers are required to give signed authorisation before their child can use the Internet, either in guided or in independent school work. Parents and carers are, however, assured that their child's use of the Internet at school is always supervised, although Year 6 have a greater range of Internet sites at their disposal. A record of those children (Years 3–6) who do have permission to use the Internet at school is kept in the ICT Suite.*

4 The Foundation Stage

- 4.1 We teach ICT in Reception class as an integral part of the topic work covered during the year. As the reception class is part of the Foundation Stage of the National Curriculum, we relate the ICT aspects of the children's work to the objectives set out in the Early Learning Goals (ELGs) which underpin the curriculum planning for children aged three to five. The children have the opportunity to use the computers, a digital camera and a floor robot. Then, during the year, they gain confidence and start using the computer to find out information and to communicate in a variety of ways.*

5 The contribution of ICT to teaching in other curriculum areas

- 5.1 The teaching of ICT contributes to teaching and learning in all curriculum areas. It also offers ways of impacting on learning which are not possible with conventional methods. Teachers use software to present information visually, dynamically and interactively, so that children understand concepts more quickly. For example, graphics work links in closely with work in art, and work using databases supports work in mathematics, while role-play simulations and the Internet prove very useful for research in humanities subjects. ICT enables children to present their information and conclusions in the most appropriate way. Much of the software we use is generic and can therefore be used in several curriculum areas.*

5.2 English

ICT is a major contributor to the teaching of English. Children's reading development is supported through talking stories. As the children develop mouse and keyboard skills, they learn how to edit and revise text on a computer. They have the opportunity to develop their writing skills by communicating with people via e-mail and they also learn how to improve the presentation of their work by using desktop publishing software. In addition, we use the Internet to access a variety of sites which target specific reading, grammar and spelling skills.

5.3 Mathematics

Children use ICT in mathematics to collect data, make predictions, analyse results, and present information graphically. Screen and floor robots allow pupils to give exact instructions for a particular route, or to use their knowledge of angles to draw a range of polygons.

5.4 Science

Software is used to animate and model scientific concepts, and to allow children to investigate processes which it would be impracticable to do directly in the classroom; they learn to program a control box to make decisions. Data loggers are used to assist in the collection of data and in producing tables and graphs.

5.5 Personal, social and health education (PSHE) and citizenship

ICT makes a contribution to the teaching of PSHE and citizenship in that children in ICT classes learn to work together in a collaborative manner. They also develop a sense of global citizenship by using the Internet and e-mail. There is consequently an Internet Acceptable Use agreement for Key Stage 2 pupils. This home/school agreement aims to develop a set of safe and discriminating behaviours for pupils to adopt when using the Internet and other technologies. Through discussion of safety and other issues related to electronic communication, the children develop their own view about the use and misuse of ICT, and they also gain an insight into the interdependence of ICT users around the world.

6 ICT and inclusion

- 6.1** *At our school, we teach ICT to all children, whatever their ability and individual needs. ICT forms part of the school curriculum policy to provide a broad and balanced education to all children. Through our ICT teaching, we provide learning opportunities that enable all pupils to make good progress. We strive hard to meet the needs of those pupils with special educational needs, those with disabilities, those with special gifts and talents, and those learning English as an additional language, and we take all reasonable steps to achieve this. For further details, see separate policies: Special Educational Needs; Disability Discrimination; Gifted and Talented Children; English as an Additional Language (EAL).*
- 6.2** *When progress falls significantly outside the expected range, the child may have special educational needs. Our assessment process looks at a range of factors – classroom organisation, teaching materials, teaching style, differentiation – so that we can take some additional or different action to enable the child to learn more effectively (e.g. a lot of software can be differently configured for different ability ranges). Assessing progress against the National Curriculum levels of attainment allows us to evaluate each child's progress against expected levels. This ensures that our teaching is matched to the child's needs.*
- 6.3** *For children with special educational needs, the use of ICT can have a considerable impact on the quality of work that they produce by increasing their confidence and motivation.*

- 6.4 *We enable pupils to have access to the full range of activities involved in learning ICT. We have a range of software which is designed to include all learners, e.g. Clicker 5. Our hardware can accept a range of input devices catering to pupils with specific difficulties. Where children are to participate in activities outside the classroom, e.g. a visit to an ICT exhibition, we carry out a risk assessment prior to the activity, to ensure that the activity is safe and appropriate for all pupils.*

7 *Assessment for learning*

- 7.1 *Staff will assess children's work in ICT by making informal judgements during lessons. On completion of a piece of work, it is assessed, and this is used to plan for future learning. Verbal feedback is given to the child to help guide his/her progress. Older children are encouraged to make judgements about how they can improve their own work.*
- 7.2 *The children's work is stored on the server in individual named folders. This allows staff to view the expected level of achievement in ICT for each age group in the school.*

8 *Resources*

- 8.1 *Our school has the appropriate computer-to-pupil ratio, and Internet access. Most software is already installed on PCs. Some software is installed only on the class PC.*
- 8.2 *We subscribe to a technician service to keep our equipment in good working order. Faults are reported to the member of staff with responsibility for system management who then contacts the technical service where necessary. This member of staff sets up new equipment and installs software and peripherals, using the technical service if required.*
- 8.3 *There are a number of school-provided laptops which are on loan to particular teachers.*
- 8.4 *In order to keep our school computers virus-free, no software from home will be installed on school computers. Pupils bringing in work on portable storage disks must first have it scanned prior to use on school computers. Where teachers are transferring files between their home and school, they must have up-to-date virus protection software on their home computers.*

9 *Monitoring and review*

- 9.1 *The co-ordination and planning of the ICT curriculum are the responsibility of the subject leader, who also:*
- *supports colleagues in their teaching, by keeping informed about current developments in ICT and by providing a strategic lead and direction for this subject;*
 - *provides the Headteacher regular updates regarding areas for further improvement.*
- 9.2 *The quality of teaching and learning in ICT is monitored and evaluated as part of the school's Development Plan and cycle for improvement.*
- 9.3 *This policy will be reviewed at least every two years.*
